

**Amendments to the Specification:**

Please replace paragraph [0025] with the following rewritten paragraph:

[0025] FIG. 3 shows hardware of the present invention. Masters and clones of the present invention may be implemented with a system [[80]]90, such as depicted in FIG. 3, which may include a display [[82]]92. Many embedded systems are rack mounted and will not have a display [[82]]92. A master system will usually have a display [[82]]92. A computer or CPU [[84]]94 performs the processes described herein and an input device [[86]]96, such as a mouse or stylus with pad, is used for control. The system [[80]]80 also includes storage (not shown), such as disc storage and RAM in which the processes and images of the present invention can be stored and on which the processes can be distributed. The processes can also be distributed via a network, such as the Internet.
